damage analysis of natural fiber reinforced polymer biocomposites destructive and non destructive evaluation and modelling presents the latest research findings in this important research field the chapters focus on the causes of damage in these materials its initiation progression detection and evaluation

using both experimental and numerical methods it is only by understanding these mechanisms at a deeper level that new materials can be developed with enhanced properties for a broad range of different industrial applications the book will be a valuable reference resource for academic and industrial researchers as well as materials scientists and engineers and other professionals working in the damage mechanics of composites and polymer biocomposite materials emphasis on damage classification and analysis covers destructive and non destructive techniques includes experimental and numerical methods includes infrared thermography x ray imaging micro computed tomography and acoustic emission covers hybrid and natural fibre reinforced composites

in the research project presented in this phd thesis an innovative type of fibre concrete is developed with improved both the tensile strength and the ductility the hybrid fibre concrete hfc the expression hybrid refers to the hybridisation of fibres short and long steel fibres were combined together in one concrete mixture this is opposite to conventional steel fibre concretes which contain only one type of fibre the basic goal of combining short and long fibres is from one side to improve the tensile strength by the action of short fibres and from the other side to improve the ductility by the action of long fibres in this research project all important aspects needed for the development and application of hybrid fibre concrete have been considered in total 15 mixtures with different types and amounts of steel fibres were developed and tested in the fresh state workability as well as in the hardened state uniaxial tensile tests flexural tests pullout tests of single fibres and compressive tests a new analytical model for bridging of cracks by fibres was developed and successfully implemented for tensile softening response of hfc at the end the utilisation of hfc in the engineering practice was discussed including a case study on light prestressed long span beams made of hfc book jacket
